

RESILIENCE HUB

NOMA TUSHEN AZIKI FARMER SERVICE CENTER 2025

Background

WFP Nigeria Country Office is implementing a 9-month project funded by FCDO. The project is focusing on **Resilience Building and Smallholder Farmers Support Project in Sokoto and Katsina**. Agriculture in Northern Nigeria holds significant potential due to its diverse agro-ecological zones, yet smallholder farmers (SHFs) continue to face persistent challenges such as limited access to quality inputs, extension services, financial services, post-harvest storage, and reliable markets. The intervention follows a sustainable modelled approach through intentionally targeting existing small holder farmers, conducting **capacity building** and **asset creation** activities through **cash for work** targeting the most vulnerable.

Implementing the partnership in Nigeria

The Resilience Hub Farmer Service Center

The World Food Program (WFP), renowned for its innovative approach to tackling food insecurity, is piloting a Farmer Service Center model, an Agri-food System change driver to support employment creation for youth and women along horticultural and rain fed agricultural value chains, increase income of farmers through a "Pay per Use Model" and contribute to state government sustainability for SHF support. The model will use a transformative resilience approach to support SHF across Project locations focusing on the following thematic areas

- (i) Professionalism and Business Development
- (ii) Diversification of Services and employment along value chains
- (iii) Digitalization and Market Linkages

Approach

The plan is audacious yet simple as it seeks to address the following

- (i) Address gaps in extension and advisory services
- (ii) Climate smart Technologies for Production
- (iii) Employment generation for youth and women along value chain nodes using pay per use revolving model for sustainability
- (iv) Address gaps of inadequate access to improved inputs by serving as a one-stop shop for agricultural inputs suitable for each agroecology.

The center is expected to provide an array of service to the community at large using a self-sustaining model. The Solar Power-Driven center shall use a common saving pot system using the VSL to foster positive social cohesion while improving on the various group dynamics. The center shall house the following units for income generation:

- (a) Farmer service and extension center
- (b) Community Storage Banks
- (c) Agro Processing mechanized center
- (d) Solar cold room and mobile charging docks

Metrics

Co-creation with local partners, Gov't and Community members for maximum impact

63% W
37% M

Over **1,000** individuals would have access to **value chain employment opportunities** in the Hub

20kVA solar power for horticulture and food processing

LifeHelpers

NOMA TUSHEN AZIKI FARMER SERVICE CENTER 2025

CORE MESSAGE

Implemented under the WFP Resilience and Smallholder Farmer Support Project funded by FCDO.

Supports smallholder farmers to increase productivity and income

Addresses major challenges: limited inputs, weak extension services, poor storage, low market access.

Uses a sustainable "Pay-per Use" model with community saving (VSL) to ensure continuity

CORE FOCUS AREAS

Climate-smart agriculture technologies

Capacity building and advisory services

Employment generation for youth and women along value chain

Improved access to inputs, storage and machine
